

Environmental Policy

BEYOND ZERO

Objective

Our objective is to deliver innovative and sustainable terminal and logistics solutions for all users of our facility including shipping lines, manufacturers of cars, trucks, heavy equipment specialised cargo, stevedores and supporting services operating in the Port of Melbourne. We recognise our operations represent a significant environmental footprint.

Implementation

We believe that the best way to reduce environmental impact, risk and cost is to be an industry environmental frontrunner and to work towards a zero emissions future. To remain true to this course, our daily activities are guided by a 5-part strategic framework.

1. We focus on those areas which have a major impact on the environment.
2. We hold ourselves accountable and transparent in our environmental commitments.
3. We exceed our responsibilities for environmental performance.
4. We invest in future technologies.
5. We cultivate partnerships with stakeholders to develop sustainable solutions which aim to exceed our mutually agreed Key Performance Indicators.

We strive to continuously improve our environmental footprint by minimising the energy used and emissions produced per transported unit because we believe in the premise that environmental harm can be prevented. We keep waste to a minimum through continuous focus on the management of resources and efficient recycling. While our environmental goals are ambitious, we believe they are also realistically attainable.

We are committed to complying with all applicable environmental regulations and in keeping with our frontrunner ambition, we aim to be that vital step ahead of existing and emerging requirements by implementing innovative solutions. Engagement with external stakeholders guides us in finding those solutions and provides the critical perspectives that we need to remain a frontrunner.
